

Microsoft Dynamics 365 Business Central

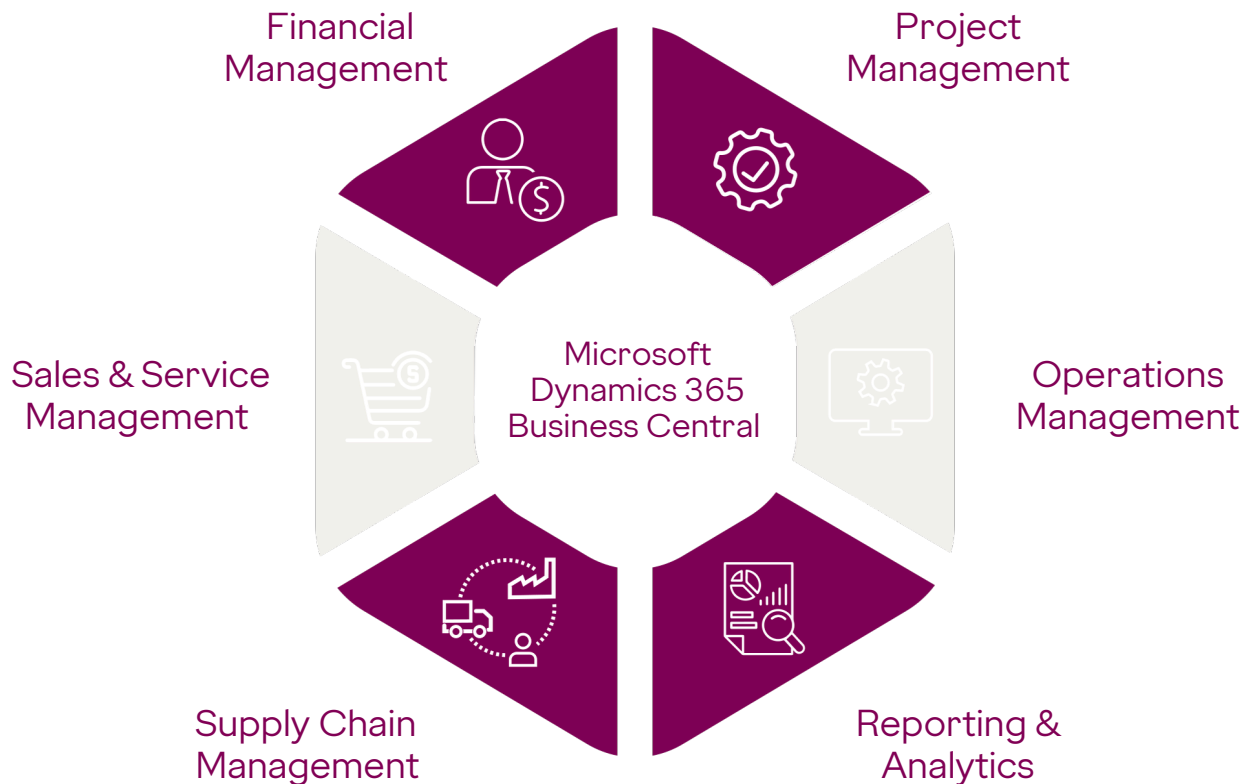

SaaS based Scalable

Business Management Solution

Microsoft Dynamics 365 Business Central

D365 Business Central brings the entire NAV functionality to the SaaS environment and is available with cloud, on-premises and hybrid deployment options. A part of the wider Microsoft Dynamics 365 solution offering, Microsoft Dynamics Business Central helps organizations to scale up effectively and get ready for the next level of business growth. A must for those looking for Digital Transformation tools and technologies, this state-of-the-art product comes with Artificial Intelligence, Machine Learning, Business Intelligence and Office 365 integration features.

Why Microsoft D365 Business Central?

Financial Management

The D365 Business Central product can be used to perform advanced financial management features such as cost accounting, capital budgeting, inter-company transactions & account reconciliations. Real-time fiscal reports can be generated, and the data can be made more user friendly with in-built Power BI data visualizations.

Sales & Service Management

Organizations can optimize their service performance with easy KPI tracking, contract agreement management, expense tracking and quality improvement activities. At the same time, the entire sales process can be done from within Outlook itself saving time & effort for the sales personnel.

Project Management

With D365 Business Central, project progress monitoring has become easier as managers can get a holistic view of real time project status including milestone deliverables, budgets, resource loading, expenses and payments.

Supply Chain Management

Effectively manage supplier relationships to ensure that the organization's inventory levels are maintained at an optimum. Advanced features such as auto-replenishment & demand forecasting can be used for creating a streamlined and smooth-running supply chain.

Operations Management

Business owners can now have visibility of all activities related to the organization, right from strategy creation to completion. Manufacturing capacity can be optimized with planned production schedules, standardized costing worksheets and intelligent demand-based resource allocation.

Reporting & Analytics

Power BI data visualizations bring the organization's data to life allowing users at different levels to interpret & make sense of reports that are relevant to their function. These features are mobile enabled to aid users on the go with real-time analytics for easy decision making.

How will your organization benefit?

Cost Effectiveness

Features such as expense and budget management along with financial planning help in increasing financial productivity

Faster Decision Making

Companies can make use of AI Driven Analytics to generate real-time BI reports & predictive insights.

Minimized Risk

Strict controls & regulation compliance help Customers get an upfront risk assessment so that timely prevention measures can be adopted

Optimized Machine Performance

IoT enabled sensors can be used to identify & fix potential machine issues before they occur.
